

THE BIG 5 2019 - DUBAI

FLOVEA - WE'RE BACK !

After last year's success as exhibitors at the BIG 5 trade show, FLOVEA has decided to join the venue once again this year! After clearly noticing a strong interest for our prefabricated solutions amongst contractors and engineers, we'll be taking with us a larger panel of products to showcase. The exhibition is, for our french company, the ideal place to meet professionals and create a strong network. We intend to bring on the Golf Market new innovative plumbing solutions that will ensure time and cost savings to professionals that are also interested in building efficient & sustainable constructions. Environmental issues are part of our company's concerns since its creation. Our range of prefabricated solutions makes daily work easier, but it also saves a huge amount of water by avoiding waste due to leakage which is often invisible until creating real damage. In the same perspective, our R&D department has been working on FLOWBOX Interactive, our connected plumbing range which we brought to the trade show last year. After receiving interest over the value of such a product, we evolved towards a new version of the product. Our wish was to bring as much benefits to both households AND professionals, so we created a «smart building» FLOWBOX, dedicated to building managers. Our technology can support them daily by providing a total control over hydraulic networks right from their smart phones with a dedicated mobile app' and help them keep an eye on the proper functioning of the system. The user will be able to track water consumption of the property he manages, but also financial expenses related to the consumption on each floor of the buildings. With our prefabricated technical ducts, collecting pipes and new FLOWBOX, the BIG 5 visitors will be first to see these innovative solutions in the Middle Est. So don't waste anymore time to come over to our booth and meet us on the French Pavilion!

OUR COMPANY

The company was built with a strong will to provide innovation in the plumbing industry in order to supply still very artisanal businesses with the latest scientific and technological advances. Specialized in prefabricated plumbing, FLOVEA has substantially invested in designing new solutions by conducting basic research and applied engineering. Therefore, the company decided to develop hydraulic network connectivity with its customers, thus diversifying its activities with smart home/buildings components. Over the years, FLOVEA was able to establish itself as the French reference brand in terms of hydro-distribution collectors and gained a foothold in the construction industry. The company is now planning on extending to the United States and to the Middle East. Follow us on social media to get our latest updates and follow our work !
